RECOMMENDATION HOLD	CURRENT PRICE \$78.19	12M TARGET \$86.00 (+9.4%)	NEXT EARNINGS 2026-07-15 (Q2 FY26E; cons \$12.58B rev / \$0.79 ...
--------------------------------------	--	---	---

Thesis
Three bullets — the whole bet

1. Ad-supported tier had 40M+ MAUs growing 34% QoQ as of Q4 2024; the tier represents 35% of new sign-ups and advertising revenue is not yet a disclosed P&L; line; monetization gap is multi-year and structurally underpriced at the current multiple.
2. Operating margin expanded 1,170bps in three years (17.8% in FY2022 to 29.5% in FY2025); content spend growing slower than revenue is the structural driver, and each 100bps of further expansion at current revenue is worth ~\$460M pretax.
3. At 20x FY2027E EPS of \$3.83, the stock is at the cheapest relative multiple in its streaming era, but FY2027 consensus growth of only 6.6% and a 7-month institutional selloff suggest the multiple compression from growth-to-value rerate is not complete.

Business overview
What the company does, how it makes money, who it sells to

Netflix is the world's largest paid streaming service, operating in over 190 countries with approximately 301M+ paid subscribers. The company produces and licenses film and television content across every genre,

distributing it over the internet to smart TVs, mobile devices, and computers. Netflix moved from DVD-by-mail to streaming in 2007 and began original content production in 2013 with House of Cards; it is now the largest single buyer of content globally by dollar spend.

BUSINESS MODEL

Netflix earns revenue almost entirely through monthly subscription fees, tiered by video quality and simultaneous screens: a standard plan with ads at a lower price point, a standard plan without ads, and a premium plan. Pricing varies materially by country. The company licenses content from studios and produces originals. Content is capitalized and amortized over its useful life, creating a large non-cash D&A; charge (\$16.8B in FY2025) that masks underlying FCF; reported FCF was \$9.46B in FY2025 on \$45.18B revenue.

SEGMENTS

US and Canada (UCAN)

Highest ARPU region at approximately \$17-18/month. Approximately 95-100M paid subscribers as of Q1 2026. Core market with mature subscriber base; primary growth driver is ARPU expansion and ads monetization rather than net adds. Netflix does not report segment margins.

Europe, Middle East and Africa (EMEA)

Approximately 100-107M paid subscribers. Second-largest revenue region. Growing at mid-teens YoY in local currency; ads tier adoption in Western Europe is accelerating.

Latin America (LATAM)

Approximately 45-50M paid subscribers. ARPU approximately \$7-9/month in USD. Password sharing conversion ongoing in several LATAM markets. Currency volatility (BRL, MXN) creates noise in USD-reported revenue.

Asia-Pacific (APAC)

Approximately 50M paid subscribers, fastest growing region. ARPU approximately \$7-8/month. India is the largest APAC market. Korean content (Squid Game, The Glory) has driven global subscriber acquisition.

TOP CUSTOMERS

Residential subscribers (direct to consumer)	99%	Netflix is almost entirely DTC; no B2B or platform licensing revenue of significance. 301M+ paid memberships as of early 2026.

Industry & competitive position
Where the company sits · moat · competitors

Paid streaming is transitioning from a subscriber-growth phase to a monetization phase. Netflix has cleared the first phase decisively with 301M+ paid subscribers across 190 countries. The TAM is expanding as streaming replaces linear TV (\$180B annual ad market in the US alone) and the ads tier addresses price-sensitive households previously inaccessible. The global SVOD market was approximately \$110B in 2024 and is growing at 12-15% annually.

TAM: \$300B

MOAT

Netflix's moat combines scale, content library depth, and recommendation technology. With 301M subscribers generating engagement data, its algorithm is more accurate than any competitor, reducing churn. Its content budget (\$17B/year) is 2-3x any competitor outside Amazon. Original IP compounds: Squid Game, Stranger Things, and Wednesday are global franchises created at a fraction of their retention value. The brand itself is a verb in some markets.

COMPETITORS

Disney+ / Hulu / ESPN	Bundled streaming under Disney; profitable but at lower standalone streaming margins. Complex corporate structure with legacy linear TV assets. 150M+ combined subscribers.
Amazon Prime Video	Bundled within Amazon Prime; subscriber count not separately disclosed and ARPU not extractable. AWS profits subsidize content spend. Not a comparable DTC streaming P&L;
Max (Warner Bros. Discovery)	Constrained by \$40B+ legacy debt from the AT&T; merger; limits content investment relative to Netflix. ~100M global subscribers. Trades at distressed media multiples.
Apple TV+	Content as a feature, not a standalone business. Minimal subscriber disclosure. Loss-leader to sell Apple devices. Premium content quality (Ted Lasso, Severance) but small library.
Spotify	Audio streaming, not video; included as a DTC subscription peer with an active advertising business. 250M+ paid subscribers. Useful comparable for ad-tier monetization benchmarking.

Bull catalysts

What needs to happen for the long thesis to play out

1 Ad-supported tier monetization is in early innings

Netflix launched its ad-supported plan in November 2022 and reported 40M monthly active users by Q4 2024, growing at approximately 34% quarter-over-quarter. As of Q1 2026, the ads tier represented roughly 35% of all new sign-ups in available markets. Netflix replaced Microsoft's ad tech with its own proprietary platform in 2025, which should improve targeting precision and CPM realization. The global digital ad market exceeds \$600B; Netflix's inventory at scale is underpriced relative to TV and digital peers. Even achieving \$3B in advertising revenue by FY2028 from a near-zero base would add roughly 400bps to operating margin without additional content spend. The ads business is a call option that the current multiple doesn't price.

2 Operating leverage: 1,170bps margin expansion in three years and still going

FY2025 operating income was \$13.33B on \$45.18B revenue, a 29.5% margin. In FY2022 that was 17.8%. The driver is content economics: Netflix's content amortization grows slower than revenue because each marginal subscriber dollar costs a fraction of original acquisition. FY2025 gross margin expanded to 48.5% from 39.4% in FY2024. Management guided to approximately 29% operating margin for FY2026. The bull case is that management is guiding conservatively: FY2027 consensus has 32%+ margin. Each additional 100bps of operating margin at \$57B of FY2027 revenue adds \$570M pretax. This trajectory has held for four consecutive years.

3 Live events open a new audience demographic and premium ad inventory

Netflix broadcast two NFL Christmas Day games in 2024, carrying an estimated 24-30M viewers per game, the largest audience Netflix had reached for a single event. It secured the NFL Christmas broadcast rights through at least 2026. WWE Raw moved exclusively to Netflix in January 2025, adding a loyal weekly audience of 4-5M viewers. Netflix is in discussions for Formula 1 broadcasting rights in North America. Live events reduce churn among sports fans, attract males 18-49 that streaming typically underpenetrates, and drive ad inventory at premium CPMs. The live events pipeline is multiyear and the content cost is largely fixed upfront.

4 International ARPU expansion: a \$1/month lift on 100M subs = \$1.2B revenue

UCAN (US and Canada) average revenue per membership is approximately \$17-18/month. APAC average is approximately \$7-8/month. LATAM is approximately \$7-9/month. The gap is structural today because purchasing power differs, but Netflix has been raising prices selectively in every market as subscriber density grows. In Spain, Portugal, and Italy, Netflix raised prices in 2023-2025 with minimal churn. The APAC subscriber base is approaching

50M. A \$1/month ARPU improvement on 100M non-UCAN subscribers = \$1.2B of incremental annual revenue at zero content cost. The international ARPU expansion thesis requires no new product, no new technology, and no new market entry.

5 Buyback program executing at 52-week low: \$9.1B in FY2025 at higher prices

Netflix repurchased \$9.13B of its own stock in FY2025, reducing basic share count from 4.295B to 4.222B. At the current \$78.19 share price, the authorization repurchases approximately 116M shares per \$9B deployed, a 2.8% annual reduction in diluted share count. The buyback has been consistent: \$6.26B in FY2024, \$6.05B in FY2023. The company's net debt was \$2.1B as of Q1 2026, declining from \$5.43B at end-2025. With FCF of \$9.46B in FY2025 growing at 20%+, the buyback is fully covered by free cash generation. Executing at the 52-week low produces greater per-share accretion than at any point in the past year.

6 Password sharing still has international runway: ~100M households unconverted

Netflix's paid sharing rollout in the US and select markets in 2023-2024 drove a step-change in subscriber additions: paid net adds were 9.3M in Q2 2023 and 8.8M in Q3 2023, multiples of prior year levels. Several APAC and LATAM markets have either not yet enforced or have lighter enforcement than UCAN. Netflix has approximately 100M households sharing credentials in markets where enforcement hasn't been tightened. Converting even 20% of those to paid memberships at \$8/month ARPU = \$1.9B of incremental annual revenue with near-100% incremental margin.

7 Content franchise flywheel: Squid Game Season 3, Stranger Things S5 in 2026

Netflix's content spend in FY2025 was approximately \$17B (including content amortization). Squid Game Season 3 is expected in H2 2026 after Season 2 (December 2024) broke viewing records with 68M views in its first week. Stranger Things Season 5 is in production. The franchise model reduces the per-dollar cost of audience maintenance: a returning season on an established IP costs less per incremental viewer than acquiring a new subscriber via original programming. The first season of Squid Game cost approximately \$21M and produced a franchise worth multiples more in subscriber retention value. Original IP compounds as cultural touchstones.

8 Gaming: 100+ titles, undervalued optionality on 300M+ subscriber platform

Netflix Games has grown to 100+ titles available to all subscribers at no additional charge. The company acquired studios including Night School Studio and Next Games. Gaming on Netflix is not yet a revenue driver; it is a retention tool and an optionality asset. If Netflix can replicate even 10% of Apple Arcade's monetization model at its 300M+ subscriber scale, the gaming line item becomes material. The 2026-2028 window may show whether this becomes a standalone revenue stream or remains bundled. In the bear case it's worthless; in the bull case it adds a \$10-15B incremental market cap contribution by 2030.

9 Management credibility: four consecutive years of beat-and-expand

CEO Greg Peters (former Chief Product Officer) oversaw the ads tier launch and the password sharing rollout, both executed on schedule. CFO Spencer Neumann delivered FCF improvement from \$1.6B (FY2022) to \$9.46B (FY2025). Netflix's guidance track record over the past two years has been accurate within 2-3%; in Q1 2026 the company beat revenue estimates by approximately 0.4%. Institutional ownership is 85.1%: BlackRock 8.2%, Vanguard 6.5%, Fidelity 4.9%, State Street 4.1%. Buybacks exceed \$9B/year with no dividend, executed by a board that has a history of disciplined capital allocation.

10 Revenue consensus underestimates ads contribution: FY2026E \$51.4B vs possible \$52-53B

FY2026 revenue consensus is \$51.4B (13.7% growth). Netflix's own Q1 2026 print showed 16.2% growth, and Q1 is typically the weakest seasonally. Q2 2026 revenue consensus is \$12.6B (+13.6% YoY). If the ads tier continues growing at 34% per quarter and international ARPU lifts, FY2026 actual could come in at \$52-53B, 1-2% above consensus. On 30%+ operating margins, a 1-2% revenue beat translates to a 4-6% EPS beat. Analyst targets cluster \$115-125 after Q1 2026 earnings; the gap to current price of \$78 is the widest in 18 months.

Bear thesis-breakers

Independent bear lane · not visible to the bull author until synthesis

1 Q1 2026 EPS quality: \$2.85B interest income anomaly inflates headline growth

Q1 2026 reported net income was \$5.28B on operating income of only \$3.96B. The gap is a \$2.85B interest income line item, versus \$36-45M per quarter in Q2-Q4 2025. At a \$12B cash balance earning 2% annually, quarterly interest income should be ~\$60M. This single item added approximately \$0.54/share to EPS. Reported EPS was \$1.23; normalized EPS would be approximately \$0.69. The FY2026 consensus EPS of \$3.59 implies analysts are backing out this item. If the stock is priced on reported trailing earnings it looks cheaper than it is; if analysts are right to normalize, the reported '86% earnings growth' loses its most visible data point.

2 Password sharing conversion is a one-time cohort, not a recurring growth engine

Netflix's subscriber surge in 2023-2024 was driven by one event: forcing password sharers to pay. Q2 2023 net adds were 5.9M, Q3 2023 were 8.8M, driven entirely by the crackdown. That cohort is now either paying or has churned. Q1 2026 net adds are not disclosed (Netflix stopped reporting subscriber count in 2025), but revenue grew 16.2% YoY. The bear question: what sustains 14% growth in FY2027 and 12% in FY2028 once the crackdown benefit normalizes? Historical pre-crackdown UCAN net adds were 0.5-1.5M per quarter. If growth reverts and advertising ramp is slower than expected, revenue growth decelerates to 8-10%, changing the multiple from 20x to 12-15x P/E.

3 Seven months of persistent institutional selling with no floor despite buy ratings

NFLX declined from \$133.91 (June 2025) to \$78.18 (June 2026), a -41.6% drawdown. The decline accelerated through each earnings report: Q3 2025 results dropped it from \$111 to \$107; Q4 2025 results dropped it from \$93 to \$83; Q1 2026 results in April dropped it from \$96 to \$93 then continued to \$78. Strong earnings reports are being sold. Institutions held 85.1% of float as of March 2026. Short interest is only 2.4% of float, so this is not a short-attack. It is large-cap active managers reducing exposure. The lack of buying conviction from 44 analysts with a \$114 mean target is notable: if the setup were compelling, the drawdown would have attracted buyers.

4 Advertising revenue unproven: 40M MAUs at market CPMs = \$1-2B run rate, not \$4-5B

Netflix reported 40M MAUs on the ad-supported tier as of Q4 2024. At a \$20 CPM, 2 hours daily viewing, and 50% fill rate, 40M users generate roughly \$876M annualized. Even at \$30 CPM and 70% fill rate, the number is \$1.5B. Netflix does not disclose ads revenue. The CPM Netflix was reportedly achieving in 2023-2024 was \$29-55, but with 40M users that's still a sub-\$2B run rate. To get to the \$4-5B ads revenue bulls need for margin expansion, Netflix would need 100M+ ad tier MAUs at \$40+ CPM with 80% fill rates. That requires the proprietary ad platform to outperform linear TV in targeting precision, which is not proven at scale.

5 Content obligation treadmill: \$22-25B off-balance-sheet commitments cap FCF upside

Netflix's streaming content obligations (off-balance-sheet) were approximately \$22-25B as of end-2024 based on prior 10-K disclosures. These are fixed regardless of subscriber trends. The \$33.4B in intangible assets on the balance sheet (Q1 2026) represents capitalized content being amortized; \$16.8B of annual D&A; flows through the income statement, requiring replacement content spend just to keep the library static. If subscriber growth slows, Netflix cannot cut content spend proportionally without accelerating churn. A 200bps operating margin compression cuts FCF by approximately \$900M on a \$45B revenue base.

6 Four C-suite insiders sold \$39M of stock at \$85-89 in May-June 2026

CEO Greg Peters sold 27,312 shares at \$88.69 on May 7, 2026; CFO Spencer Neumann sold 9,253 shares at \$88.95 on the same day; Co-CEO Ted Sarandos sold 27,312 shares at \$87.96-87.98 on May 5; Chief Content Officer David Hyman sold 5,722 shares at \$88.08 on May 5. Founder Reed Hastings then sold 386,700 shares at \$85.85-\$86.73 on June 1. All five top insiders sold within 30 days of each other at prices 9-14% above today. Insider sales are often pre-planned via 10b5-1 schedules, but the concentration across five executives and the subsequent price decline to \$78 raises a question about what management sees in the next 12 months.

7 Live events create event-driven churn, not structural retention

Netflix's NFL Christmas Day broadcast in 2024 cost approximately \$150M for two games. WWE Raw is a \$5B, 10-year deal averaging \$500M annually. Live events create a specific churn pattern: users subscribe around events and cancel between them. Amazon's Thursday Night Football created a similar pattern: NFL viewers subscribe during football season and have above-average churn in Q1. Sports rights are in an auction market: Disney, Amazon, Apple, and YouTube are all bidding. Netflix entered late with financial capacity to compete, but the NFL, NBA, and F1 are extracting maximum value. Rights cost escalation is a structural risk not in current consensus models.

8 FY2027 EPS consensus of 6.6% growth implies the deceleration is already visible

The 44-analyst consensus for FY2027 EPS is \$3.83, up only 6.6% from FY2026E of \$3.59. Revenue growth consensus decelerates from 13.7% (FY2026E) to 11.7% (FY2027E). The market is asked to pay 20x forward P/E for a business that analysts project will grow earnings 6.6% by next year. A 6.6% earnings grower at a 4.5% risk-free rate deserves 12-14x forward P/E, not 20x. Even if revenue beats, operating leverage requires margin expansion that hasn't been visible in the recent downtrend. FY2026E EPS of \$3.59 at 15x = \$53.85. That is the multiple compression risk if Netflix re-rates to in-line media.

9 China exclusion caps realistic addressable market at 30-37% penetration already

Netflix is blocked in China, a market of 1.4 billion people. Without China, Netflix's addressable broadband household market is approximately 800M-1B globally. 300M paid subscribers represents 30-37% penetration. Compounding at 14% revenue growth requires either ARPU expansion (limited by purchasing power in remaining growth markets) or

continued net adds from an already-penetrated TAM. Chinese platforms (iQIYI, Tencent Video) are expanding into Southeast Asia where Netflix competes. The subscriber math gets harder every year.

10 Beta 1.49 amplifies any macro shock; NFLX already fell 76% in 2022 on a subscriber miss

NFLX's 5-year beta is 1.491. NFLX has already declined 41.6% over 12 months during a period when the broader market was roughly flat. In a recession scenario (S&P; -25%), NFLX would imply a -37% decline from current levels, to approximately \$49/share. Consumer discretionary entertainment is a first-cut household budget item; Netflix's ad-supported tier at \$6-7/month partially hedges this by offering a cheaper option, but subscriber counts and ARPU both contract when unemployment rises. The 2022 incident, when NFLX fell 76% peak to trough, is the historical template for what happens when subscriber growth disappoints by even 2M in a single quarter.

BEAR CASE IN ONE PARAGRAPH

NFLX has fallen 41.6% from its June 2025 peak and is now trading \$3.19 above its 52-week low of \$75.01. Three consecutive quarterly earnings reports beat consensus and the stock declined anyway, which is the clearest signal that institutional sellers are exiting a position, not reacting to fundamentals. The catalyst stack bulls cite (ads, live events, international ARPU) requires three things to work simultaneously: advertising CPMs holding at premium levels against an increasingly crowded digital ad market, live events not generating event-driven churn, and international price increases proceeding without subscriber defection in macro-sensitive emerging markets. Any one of these failing is a 2024-style subscriber miss. Q1 2026 earnings quality is weak: the reported 86% earnings growth included a \$2.85B interest income anomaly that is not recurring; stripping it out, normalized EPS was approximately \$0.69, below Q2 2026 consensus of \$0.79. The FY2027 consensus EPS of \$3.83 implies only 6.6% growth, meaning analysts themselves see a significant deceleration ahead. At 15x \$3.83, the stock is worth \$57.45. Getting there requires no recession, no advertising miss, and no further multiple compression from the growth-to-value rerate that has been underway for 12 months. The tail risk is larger: in the 2022 incident, NFLX fell 76% peak to trough when subscriber growth missed by 2M in a single quarter.

Key structural risks

Risks orthogonal to the bear thesis · what breaks the long term, not just the next print

STRUCTURAL

Password sharing conversion exhaustion in UCAN

The 2023-2024 net adds surge was a one-time cohort conversion. Historical pre-crackdown UCAN net adds were 0.5-1.5M per quarter. If growth reverts post-crackdown and advertising ramp is slower than expected, revenue growth decelerates to 8-10%, triggering a multiple compression from 20x to 13-15x P/E. Netflix no longer discloses subscriber counts, preventing early detection.

EXECUTION

Advertising technology buildout: CPM underperformance risk

Netflix replaced Microsoft's ad tech with a proprietary platform in 2025. Building an ad server, DSP, and measurement infrastructure from scratch is a 3-5 year program that historically overruns costs. Netflix's CPM realization may be 30-50% below projections if targeting accuracy is suboptimal in the first 2-3 years. Advertisers can shift budgets to YouTube, Disney+, or Amazon if Netflix delivery metrics disappoint.

CYCLICAL

Consumer spending contraction in an ad-revenue ramp year

FY2026-2027 are supposed to be the years when Netflix's ad revenue inflects from near-zero to material P&L; contribution. If a US recession causes advertisers to pull spend, the advertising ramp is pushed 18-24 months. Ad market contractions of 15-25% happened in 2020 (Q2) and 2009. Netflix's ad exposure grows just as macro visibility deteriorates.

REGULATORY

EU Digital Markets Act: 30% local content quota increases cost per dollar of revenue

The EU's DMA requires Netflix to carry 30% local European content in each member state. Compliance forces content spend toward local-language productions that have lower global leverage than English-language originals. France, Germany, Italy, and Spain each impose separate quotas. As EMEA revenue grows as a share of total, this structural content cost drag grows proportionally.

CUSTOMER 100% DTC creates step-function subscriber count volatility

Netflix has no B2B or licensing revenue buffer. 99%+ of revenue is monthly subscriptions from individual households, creating a step-function risk: a single-quarter subscriber miss of 3-5M households triggers \$400-700M of annualized revenue shortfall with no offset. Enterprise software companies can miss on billings but recover on backlog; Netflix has no backlog and deferred revenue of only \$1.77B.

STRUCTURAL Content intangibles \$33.4B (55% of total assets) at impairment risk

The entire carrying value of content assets depends on continued subscriber engagement. An impairment test trigger (10%+ engagement decline sustained) could force multi-billion write-downs. Tangible book value is negative (-\$6.2B as of FY2025): goodwill and intangibles exceed stockholders equity by 23%.

EXECUTION Live events rights cost escalation in a competitive auction market

NFL Christmas rights, WWE Raw (\$5B/10 years = \$500M/year), and potential F1 or NBA bids involve fixed annual commitments regardless of viewership. Sports rights are in an auction market where Apple, Amazon, Disney, and YouTube drive prices up. If Netflix signs another major sports deal in 2026-2028, content cost per subscriber could increase \$5-8 annually, compressing FCF margins by 200-300bps.

Peers

NTM P/E, EV/EBITDA, growth, and YTD / 1Y returns across the peer set

Ticker	NTM P/E	EV/EBITDA	Rev growth	YTD	1Y
NFLX	20.4x	11.1x	+16.2%	-13.9%	-35.6%
DIS	13.6x	11.4x	+6.5%	-8.8%	-12.7%
WBD	—	12.8x	-1.0%	-7.0%	+150.7%
SPOT	25.1x	37.1x	+8.2%	-19.7%	-36.0%

Read: Netflix commands the highest revenue growth (16.2%) of any pure-play streaming comparable, trading at 20.4x NTM P/E versus Disney at 13.6x. The EV/EBITDA gap is minimal: 11.1x for NFLX versus 11.4x for DIS, which is notable because Netflix has structurally higher content amortization as a % of EBITDA than Disney (Netflix EBITDA is inflated by \$16.8B D&A; add-back). Spotify at 37x EV/EBITDA shows the premium paid for a subscription audio platform with an explicit advertising business. NFLX could re-rate toward Spotify's multiple if advertising revenue becomes visible and disclosed. WBD's -1% revenue growth with 12.8x EV/EBITDA is the distressed-media floor; Netflix is nowhere near that scenario. On a revenue growth-adjusted basis, NFLX at 20x P/E for 16% growth implies a PEG of 1.55x, which is not expensive relative to software growth peers at 2-3x PEG.

DCF triangulation

Bear / Base / Bull scenarios · WACC × terminal growth × FCF growth path

Scenario	WACC	Terminal g	FCF path	Implied px
Bear	11.0%	2.5%	(base FCF)	\$30.47
Base	(base)	(base)	(base FCF)	\$91.10
Bull	8.5%	4.0%	(base FCF)	\$130
Current price				\$78.19

Synthesis — three paths

20% Bear x \$30.47 + 55% Base x \$91.10 + 15% Bull x \$130.43 + 10% EV/EBITDA cross-check x \$98.03 = \$85.56 (Python DCF), rounded to \$86. Business is fundamentally sound: 16% revenue growth, 30% operating margin, \$9.46B FCF. But seven months of persistent institutional selling, a Q1 earnings quality concern (anomalous \$2.85B interest income), and FY2027 consensus EPS growth of only 6.6% limit re-rating potential near term. Not cheap enough to buy, not broken enough to sell.

Bear · \$28-45

20% probability

Password sharing conversion complete, advertising ramp delayed by macro, subscriber count miss triggers multiple compression to 12-15x P/E on decelerating EPS. Historical precedent: NFLX fell 76% in 2022 on a 200K subscriber miss.

Base · \$85-100

55% probability

Revenue grows 13-16% annually, operating margin expands to 31-32% by FY2027, advertising contributes \$1-2B by FY2028. Stock re-rates from 20x to 22-24x forward P/E as ads visibility improves.

Bull · \$110-130

15% probability

Advertising ramp accelerates to \$3B+ by FY2028, international ARPU expansion beats expectations, content franchises drive above-consensus subscriber adds. Stock re-rates to 27-30x forward P/E with explicit ads revenue disclosure acting as catalyst.

Management & capital allocation	
Who runs the company · how they deploy capital · recent insider activity	
CEO	Greg Peters, Co-CEO since January 2023 (formerly Chief Product Officer); Ted Sarandos, Co-CEO since 2020 (content strategy)
CFO	Spencer Adam Neumann, CFO since 2019
INSIDER OWNERSHIP	0.6%

CAPITAL ALLOCATION HISTORY
Netflix returned \$9.13B via share buybacks in FY2025, \$6.26B in FY2024, and \$6.05B in FY2023. There is no dividend. Net debt has declined from \$9.2B (FY2022) to \$2.1B (Q1 2026) as FCF generation accelerated. The company holds \$12.3B in cash as of Q1 2026. Capital allocation is entirely discretionary buybacks; no M&A; of note since the gaming studio acquisitions (Night School Studio, Next Games) completed 2021-2022.

RECENT INSIDER ACTIVITY

Date	Insider	Action	Value
2026-06-01	Reed Hastings, Director (Founder)	Sale	+\$33.2M
2026-05-07	Greg Peters, Co-CEO	Sale	+\$2.4M
2026-05-07	Spencer Neumann, CFO	Sale	+\$0.8M
2026-05-05	Ted Sarandos, Co-CEO	Sale	+\$2.4M
2026-05-05	David Hyman, Chief Content Officer	Sale	+\$0.5M

Social sentiment

Cross-source signal · Reddit / X / news

Social sentiment data not available in this session (Adanos and Twitter/X reader skills not accessible). Bear case is not a short-seller-driven thesis; no Hindenburg/Muddy Waters/Citron reports found for NFLX as of June 2026. Short interest modest at 2.4% of float (101.6M shares, up from 95M prior month), short ratio 3.06 days. The 7-month price decline is consistent with institutional rotation, not a retail-driven or short-attack event.

Recommendation	
Action by holder type	
DIRECTION	HOLD; fundamentally intact but technically broken; not a buy until institutional selling abates or a specific re-rating catalyst appears

12M TARGET	\$86 probability-weighted (20% Bear \$30.47 + 55% Base \$91.10 + 15% Bull \$130.43 + 10% cross-check \$98.03 = \$85.56 Python DCF)
EXISTING LONGS	Hold through Q2 2026 earnings (July 2026); watch for advertising revenue disclosure or subscriber count normalization signal. Stop-loss below \$72 (7.9% below current).
NEW MONEY	Wait for technical stabilization: two consecutive weeks closing above \$83 with declining volume, OR a Q2 2026 earnings report that reveals an explicit advertising revenue contribution above \$400M quarterly.
HEDGE	Downside risk to \$49 in a recession scenario; a put spread at \$70/\$55 strike expiring December 2026 costs approximately 3.5% of notional and covers the tail risk.
POSITION SIZING	Max 3-5% portfolio weight at current prices given beta 1.49 and 23.7% realized vol; 41.6% drawdown from highs already absorbed most of the re-rating, but FY2027 EPS deceleration risk warrants below-benchmark sizing.

Catalysts to watch

- Q2 2026 earnings (July 2026); advertising revenue disclosure (if first explicit segment breakout), subscriber engagement metrics, guidance raise or cut for FY2026
- Netflix Upfront advertising event (May/June 2026 cycle). CPM pricing commitments, ad tier MAU disclosure, any specific revenue target
- Q1 2026 10-Q filing; explanation of \$2.85B interest income anomaly, off-balance-sheet content obligation update
- Analyst consensus revision direction post-Q2 2026; if 5+ firms lower FY2027 targets below \$3.60, multiple compression scenario accelerates
- Institutional 13F filings (August 2026 for Q2 2026 period); whether BlackRock and Vanguard are reducing or adding
- Sports rights announcements; any NBA, F1, or new NFL deal would signal cost escalation risk or content moat expansion

Data gaps

What this cycle could not pull · to be filled next run

- Advertising revenue not disclosed separately; Netflix does not report ad tier revenue as a line item. Estimated at sub-\$2B annualized based on CPM/MAU math.
- Subscriber count no longer disclosed from FY2025 onwards; regional net adds unavailable from public filings.
- Exact geographic revenue split (UCAN/EMEA/LATAM/APAC) not available in yfinance; estimated from public disclosures.
- Q1 2026 interest income of \$2.85B is anomalous and source is unidentified in available data; needs 10-Q verification.
- Live events (NFL, WWE) contract economics not publicly disclosed; cost estimates based on public media reporting.
- Content obligations off-balance-sheet total as of Q1 2026 not available; FY2024 figure of \$22-25B used as approximation.
- Gaming MAU and title economics not disclosed.
- Adanos sentiment and Twitter/X short-side commentary not available in this session.
